

Problem Statement: The traditional remote control is overly complex with too many buttons, making it difficult for users to find the right controls quickly.

Solution: Simplify the traditional remote design by reducing the number of buttons and grouping similar functions together, akin to the minimalist design of the smart TV remote shown beside it.

Problem Statement: Only thunderbolt port available. So need an extender to connect other devices such as USB or ethernet etc.

Solution: Laptops should have an inbuilt USB ports.

Problem Statement: Bus passengers may struggle to locate and press the small, single stop button, especially in crowded conditions.

Solution: Install larger, more numerous stop buttons distributed throughout the bus to ensure easy access for all passengers.

Problem Statement: Cant use laptop charger and mobile charger at the same time because the sockets are small.

Solution: Redesign the extension with larger sockets.

Problem Statement: The Apple Magic Mouse cannot be used while charging due to its bottom-positioned charging port.

Solution: Redesign the Magic Mouse with a side or front-positioned charging port to allow for usage while charging.
